

Progress Report :

Day 1 :

First I understand what a Time Traveller Debugger actually is and how it is beneficial in code debugging . Then how to make Stack using Linked List and Its basic Operations .

Day 2 :

Make TimeLine Doubly Linked List which we will use to Traverse forward and backwards . Then some utility function used in code like validating the code . For Validating the code I use counter of depth and funCount and for reading file I made a string Lines . After Reading the whole file if depth is not equal to 0 then it shows error or funCount is equals to zero it shows error as well .
